

# Project Manager – Energy Markets and Flexibility

As part of our ongoing success in securing innovation projects within the Horizon 2020 programme, EMAX is pleased to be strengthening our growing team with a Project Manager – Energy Markets and Flexibility.

## General Position Descriptions

As the Project Manager - Energy Markets and Flexibility, your main focus is on coordinating and delivering EMAX's Horizon 2020 work packages related to electricity markets, electricity storage, aggregation, demand side response, peer-to-peer and grid technologies that enable increased uptake of renewable energy and energy self-consumption.

Tasks will include project management and execution of EMAX's scope within the projects. In practice, this will include market research and analysis, evaluation of new markets, evaluation of technology options, and business model analysis. You will produce deliverables for the Horizon 2020 work packages on time and to a high level of quality. You will also interact with partner organisations involved in the work packages, working with them to support the successful execution of EMAX's scope.

EMAX is a growing company and we are developing new solutions for the energy sector, in particular relating to markets and flexibility. Your role will therefore also involve supporting the product development team with your expertise and the knowledge we develop in our projects.

The position will be based in Brussels. Relocation will be considered for suitable candidates.

## Key responsibilities

- Work package leader for EMAX activities in the FLEXITRANSTORE.eu project, with a focus on business models, market design and exploitation of innovation results. Your first mission will involve working with experts from partner organisations to develop a proposal for an enhanced market design focusing on the integration of renewables, and new business models for market players and network operators, incorporating flexibility services
- Work planning, and ultimately work package leader, for the Horizon 2020 INTERRFACE.eu project, involving peer-to-peer trading
- Production of deliverables for Horizon2020 projects with reports, presentations and attendance at project plenary meetings
- Supporting the commercialisation of innovation in the Horizon 2020 projects by close collaboration with the product development team
- Market analysis to support the execution of deliverables and product development on topics including energy storage, aggregation, demand side response and enabling technology
- Supporting EMAX's sales efforts by assisting with the collection, coordination, and preparation of communication and documentation, internal and external presentations and proposals, including supplier and customer contracts, utility applications and requests for tendering

## About you

We are looking for highly motivated individuals who want to be part of a fast-paced and fluid company poised for growth in one of the Europe's most rapidly changing industries.

You are forward-thinking, innovative and comfortable with complexity and uncertainty. If you were to describe your experience, you would say that:

- You are a graduate in electrical engineering, economics or IT-related field with five years of experience in the energy sector

- You have experience in project management and collaborative research projects involving virtual or cross-border working
- You understand the analysis of and development of business models emerging trends in the electricity sector.
- You have strong organisational and project management capabilities and you are able to function autonomously
- You have strong communication skills, both orally and in writing, and ability to capture complex subjects in readily understandable terms. Your English level is at least C1/C2.
- If you had knowledge of electricity markets, as well as previous experience in Horizon 2020 projects, it would be a strong advantage.

## **Who is EMAX?**

EMAX is a Brussels-based business consultancy and technology firm specialising in the electricity sector and consists of high-level experts in research and innovation in transmission and distribution systems. EMAX is a bridge between R&D excellence and business realization. Its mission is to empower end-customers on their path towards green energy and self-sufficiency.

As part of its ongoing success in securing funding for the development of innovative tools for the energy sector, EMAX will be building a cutting-edge software system that will significantly increase the ability for electricity networks to deploy renewable energy, battery storage, electric vehicles and other low carbon technology.

EMAX is a young and innovative organisation where you will have the chance to develop yourself to your full potential. You will develop entrepreneurship spirit and leadership skills.

You have chance to work in important roles in European projects with 30 to 40 leading companies and enhance your skills by interacting with many high skill experts in the field.
